Reson8 Platform

Phase 1 — Executive Report

Prepared by: ID8 Media · Product Engineering

Date: May 2026

Version: 1.0

Executive Summary

Reson8 is an end-to-end broadcast intelligence platform that converts live world events into on-air Vizrt graphics in under 4 seconds — fully reviewed by editorial teams, in any of 10 supported languages.

Phase 1 delivers a production-ready broadcast platform across five content modules: Elections, Sports, Finance & Markets, Weather, and Breaking News. Every module is built on a shared editorial core — the same Producer → Editor → Operator → Take to Air chain, the same Vizrt integration, and the same control room — powered throughout by the Sentra AI Engine.

Phase 1 is the complete, shippable product. It is not a prototype.

Platform Architecture

Core pipeline — same for every module:

Ingest → Contextualize (Sentra AI) → Generate → Review (Editorial) → Take to Air (Vizrt)

One non-negotiable rule: A human decision — the Editor’s approval — is always the final step before any graphic reaches air.

Phase 1 Scope at a Glance

Layer	Features	Notes
Sentra Engine	12	Always active · no activation required
Reson8 Core	29	Shared across all 5 modules · built once
ORA — Elections	31	Flagship module

Layer	Features	Notes
ARENA — Sports	25	Football-first
PULSE — Finance & Markets	18	Live market data
ATMOS — Weather	12	Severe weather alerts
FLASH — Breaking News	16	Real-time breaking detection
Total	143	

Language Support — Approved 10 Languages

Group	Languages
UN Core (6)	English · Arabic · French · Spanish · Russian · Chinese
Regional (4)	German · Portuguese · Persian · Turkish

Monitoring (input): All 10 languages — the Engine reads, understands, and analyses content arriving in any of the 10 languages across social media, news wires, and data feeds.

Broadcast output: Arabic and English as primary · French as optional third output language for North Africa markets.

Module 1 — ORA Elections

Tagline: Wire to on-air election results in 4 seconds.

What Phase 1 Delivers

Feature Group	Features	Description
System Setup	8	Election config · candidate & party databases · constituency mapping · results feed integration · Vizrt scene assignment
Live Results	7	

Feature Group	Features	Description
		Real-time vote counts · seat tally · lead/trail indicators · constituency drill-down · results validation
Interactive Map	3	Geographic results map · regional drill-down · colour-coded party performance
Entity Profiles	4	Candidate & party profile cards · social sentiment · media presence
Election Preparations	3	Historical data · polling integration · template pre-load
Social Sentiment	4	Election social listening · candidate & party sentiment · hashtag tracking
Breaking News	2	Elections breaking feed · results threshold alert
Total	31	

Key Capabilities

- Official results feed ingested, validated, and on-air in ≤4 seconds
- Results validation layer flags anomalous data before it reaches the editorial queue
- Candidate and party social sentiment running in real time alongside official results
- All graphics bilingual Arabic + English simultaneously
- Full editorial audit trail — every on-air action immutably logged

Module 2 – ARENA Sports

Tagline: Every goal, card, and stat on air before the crowd stops reacting.

What Phase 1 Delivers

Feature Group	Features	Description
System Setup	7	Competition config · team & player databases · match schedule · Opta/Stats Perform integration
Live Match	6	Live score · match clock · match events (goals/cards/subs/VAR) · basic stats · validation
Entity Profiles	3	Player & team profile cards · player social sentiment
Competition Context	4	League table · form guide · head-to-head · top scorers
Social Sentiment	3	Match social listening · team sentiment comparison · trending hashtags
Breaking News	2	Sports breaking feed · match alert
Total	25	

Key Capabilities

- Every match event (goal, card, substitution, VAR) automatically enters the editorial queue the moment it is reported by the official data feed
- Live league table and top scorers updated after every result
- Fan sentiment tracked per team throughout the match window

- Score bug, stats panels, player cards — all native Vizrt scenes

Module 3 — PULSE Finance & Markets

Tagline: Market moves on screen before the ticker scrolls.

What Phase 1 Delivers

Feature Group	Features	Description
System Setup	5	Market config · instrument database · Bloomberg/Reuters feed integration · alert thresholds
Live Market Data	7	Live prices · indices · gainers/losers · FX rates · commodities · market status · open/close events
Entity Profiles	2	Company & index profile cards
Social Sentiment	2	Market social listening · instrument sentiment
Breaking News	2	Financial breaking feed · market threshold alert
Total	18	

Key Capabilities

- Live prices, indices, FX, and commodities from Bloomberg / Reuters / exchange APIs
- Automatic alert and graphic trigger when any instrument crosses a configured threshold
- Market open and close events fire graphics automatically into the editorial queue

- Investor sentiment from social and financial news running in real time alongside price data
-

Module 4 – ATMOS Weather

Tagline: Severe weather on screen before the public gets the alert.

What Phase 1 Delivers

Feature Group	Features	Description
System Setup	4	Coverage area config · weather API integration · template library · severe alert thresholds
Live Weather	6	Current conditions · 3/7-day forecast · temperature map · severe alerts · weather symbols · city cards
Breaking News	2	Severe weather breaking alert · editorial queue routing
Total	12	

Key Capabilities

- Current conditions, forecast, and temperature maps for all configured cities updated continuously
 - Severe weather warnings from national meteorological authorities route directly to the editorial queue — the editor sees the alert before it is public
 - Full standardised weather symbol library built into Vizrt scenes
-

Module 5 – FLASH Breaking News

Tagline: Breaking detected across 10 languages before a journalist spots it.

What Phase 1 Delivers

Feature Group	Features	Description
System Setup	4	Source config · severity classification · template library · keyword & topic alerts
Live Breaking	9	Breaking detection · alert queue · severity display · multi-source aggregation · source attribution · geographic tag · cross-source verification · ticker · flash overlay
Editorial Chain	3	Breaking confirmation workflow · audit trail · developing story tracker
Total	16	

Key Capabilities

- Sentra Engine classifies breaking events across social and news simultaneously in all 10 languages — no manual monitoring required
- Severity automatically classified: Major Breaking / Breaking / Developing
- Cross-source verification confirms a story across independent sources before flagging
- Developing story thread maintained and updated as new information arrives

- Nothing goes to air without editor confirmation — the full editorial chain applies to breaking news
-

Reson8 Core — Shared Platform

All five modules inherit the full Reson8 Core. It is built once.

Editorial Chain (7 features)

Producer Preparation Queue · Editor Approval Layer · Operator Take to Air · Reject & Revise Workflow · Live/Preview Separation · Editorial Audit Trail · Editorial Review Gate

Vizrt Integration (3 features)

Vizrt Scene Binding · Direct Data Feed to Vizrt · Viz Engine Output

Control Room (6 features)

Control Room Dashboard · Multi-Screen Management · Operator Role Assignment · Real-Time Status Monitor · Emergency Override · Broadcast Event Log

AI Content Generation (3 features)

Auto-Generated Headline · Lower-Third Caption Generation · Bilingual Broadcast Text (Arabic + English)

Access & Security (5 features)

Role-Based Access Control · Audit Logging · Multi-Tenant Architecture · Notification System · Broadcast Security & Auth

Performance & Reliability (5 features)

≤4 Second Wire-to-Air SLA · 99.99% Uptime · Feed Redundancy · Broadcast Output Failover · On-Prem or Cloud Deployment

Team & Delivery Estimate

Team Composition

Role	Capacity
Technical Manager (14 years)	Architecture · code review · 60% development
Senior Developer 1	Full development
Senior Developer 2	Full development
Product Engineer	Requirements · UAT · delivery management
Product Manager	Scope · stakeholder · grooming

Effective development velocity: 26 dev-days per 2-week sprint

Recommended Delivery Sequence

Stage	Sprints	Weeks	Content
1 — Foundation	1 – 2	1 – 4	Architecture · infrastructure · Sentra Engine connection · Vizrt SDK
2 — Reson8 Core	3 – 6	5 – 12	Editorial chain · control room · AI content · security · performance
3 — ORA Elections	7 – 10	13 – 20	Full elections module · all 31 P1 features
4 — ARENA + FLASH	11 – 13	21 – 26	Sports and breaking news in parallel
5 — PULSE + ATMOS	14 – 15	27 – 30	Finance and weather in parallel

Stage	Sprints	Weeks	Content
6 – QA · UAT · Hardening	16 – 17	31 – 34	Full system testing · SLA validation · security audit

Headline Timeline

Delivery	Timeline	Content
Release 1	Month 6	Core + ORA Elections · first client ready
Release 2	Month 9	All 5 modules · full platform live

What Phase 1 Deliberately Excludes

Deferred to Phase 2 and Phase 3 to keep the P1 scope focused and deliverable:

Feature	Deferred to
AI Prediction Engine (all modules)	P2
Swing Analysis & Turnout Map	P2
Coalition & Seat Mathematics	P2
Expected Goals (xG)	P2
AI-Generated Candidate & Player Briefs	P2
Viral Claim Detection	P2
Commentary Talking Points	P2
Ticker Copy Generation	P2
Multi-Output Management	P2
Transfer & News Intelligence (Sports)	P2
Advanced Market Analytics	P2
Social-to-Results Correlation	P3
Constituency Service Records	P3

Definition of Done — Phase 1

Phase 1 is complete when:

- All 143 features are implemented and passing acceptance criteria
- ≤4 second wire-to-air SLA validated under load for all 5 modules
- Full editorial chain tested end-to-end: Producer → Editor → Operator → Vizrt → On-air
- All 10 languages processing correctly through the Engine
- Security audit passed · RBAC verified per role
- UAT signed off per module by the product team
- Deployment validated on-premises or cloud per client requirement
